Bachelor of Science Degree Schedule - Fall 2023

BUSA 31305 Principals of Management
M & W 2:25 – 3:40 pm       P201       3.0 credits
Tara Schulz, MBA
Prerequisite: None
This course will examine current management theories. Subjects covered include development of American management, motivation, leadership, effectiveness, diagnosing the environment, power, decision making and change.

BUSA 31341 Business Ethics
W 3:45 – 6:15 pm           P202       3.0 credits
Brett Nielsen, MBA
Prerequisite: Junior Standing
This course discusses the subject of ethical decision making in business situations including ethical principles, a framework for understanding ethical decision making and organizational culture, relationships and conflicts related to ethical situations. The format of the class will be interactive and participatory.

HUMA 31310 History of Health Science
T 3:45 – 6:15 pm           P201       3.0 credits
Roger Hynes, D.C.
Prerequisite: College-level communications course recommended
An overview of the history of the healing arts from ancient to modern times will be covered. A special emphasis is placed on the proliferation of the healing professions in the United States and Europe between 1865 and 1920.

KINE 31310 Kinesiology – Study of Human Movement
M 3:45 – 6:15 pm           P202       3.0 credits
Ranier Pavlicek, DC
Prerequisite: Anatomy and Physiology
This course deals with the study of muscles as they are involved in the science of athletic movement. Students will understand the relationship between muscles, joints, bones, and nerves during movement. Students will study the mechanical principles of human movements as related to functional anatomy.

PSYC 31340 Abnormal Psychology
H 3:45 – 6:15 pm           P202       3.0 credits
Megan Parketon, MA
Prerequisite: General Psychology
This course will take a look at abnormal psychology or psychopathology. Through lecture, individual projects and class discussion, the student will learn to recognize the symptoms of the major mental illnesses. In addition, the course will also explore different approaches to psychotherapy, with a critical discussion concerning the different therapies. The student will leave this course with a firm understanding of what characterizes a mental illness and the best approach to take in helping the person overcome the maladaptive behavior. Exams will focus on both the diagnostic characteristics of the various disorders and on using knowledge obtained in the course in a practical and applied way. The case study assignments will allow students to use the knowledge obtained in the course and through the DSM IV to make an actual diagnosis of an individual.
Lower-Level Course Offerings (1-200 level) – NOT needed by most current DC students

ANAT 22200 Anatomy & Physiology
This course provides an introduction to human anatomy and physiology, focusing on the organization of the body from the level of the cell up to the level of the human organism as an integrated unit. Topics in this lecture and lab course include the structure and function of cells, tissues, and systems of the body as well as fluid, electrolyte and acid-base balance.

ANAT 22201 Introduction to Neurology
This course provides an overview of the human nervous system, focusing on the structure and function of the central and peripheral nervous systems. This lecture course will also include an introduction to the special senses and the development of the nervous system.

CHEM 22200 Chemistry- Health Sciences
This course through lecture and lab explores fundamental concepts relevant to the study of the health sciences. It includes topics in general, organic, and biological chemistry.
